Abstract: *The article discusses the issues of outsourcing, the advantages and disadvantages of outsourcing, as well as options for outsourcing*

Keywords: *outsourcing, road transport, concept, strategy, information infrastructure, computer networks, capital construction, advertising, accounting.*

The formation of an innovative economy and the adoption of business management decisions require operational economic decisions. Leaders of strong competitive companies actively use all available technological potential, attract more qualified workforce and introduce innovations.

They mainly looked at external outsourcing functions in terms of business processes or production cycles. The work of scientists and specialists in the field of automobile transport, economics and finance covered issues related to the implementation of automobile outsourcing.

However, less attention is paid to the methods and tools used to determine the success of outsourcing. This topic is relevant and requires appropriate research.

Outsourcing allows to use organizational, financial and human resources or to focus on actions that do not require attention to increase the efficiency of the enterprise.

Outsourcing in entrepreneurship in Uzbekistan is widely used in areas such as accounting, mobile services, translation services, transportation services, development of a computer network and information infrastructure, advertising services and security.

One of the main advantages of outsourcing is the reduction of organizational costs and at the same time improving the quality of services. In addition, he will:

• Reducing the costs of organizing and at the same time improving the quality of services. In addition, he will:

• release of part of human resources from their duties and directing them to more productive tasks that will improve the quality of their core business;

• elimination of time and energy costs for personnel to solve transport problems.

Features of outsourcing in vehicles. The head of any enterprise that owns a parking lot has a choice of manage by himself or using outsourcing services. Practice shows that outsourcing companies have significantly improved the production process, business efficiency and, consequently, increased revenues. The reason is simple: material and human resources are concentrated on the main activity, and not on the "scatter".

Today, outsourcing is actively used by large and small enterprises. The advantages and disadvantages of outsourcing are presented in table 1.

Advantages disadvantages

1. Reduce the costs of outsourcing and reduce risks through collective investment;

2. The quality of products and services will be improved;

3. There is no need for existing mobilization tools for investing in secondary activities;

4. Increase labor productivity by focusing on core activities and the efficient use of human labor.

5. Conduct teamwork using outsourcing due to the limited knowledge and skills of each specialist;

6. New and innovative technologies are used.

1. Control over outsourcing functions is reduced;

2. To increase the risk in the information flow of the enterprise;

3. Inadequate work of an outsourcing organization reduces the quality of products;

4. If functions related to cash flows are outsourced, this will lead to a division of income;

5. The increase in profitability will largely depend on the economic efficiency of production.

Outsourcing of one function in enterprises and organizations is a key indicator of cost reduction. This can be directly related to direct costs of production, as well as direct expenses. Outsourcing of specific functions to reduce costs and services of a specialized organization.

Features of auto outsourcing. The head of any enterprise that owns a parking lot has a choice of self-driving or outsourcing services. Practice shows that outsourcing companies have significantly improved the production process, business efficiency and, consequently, increased revenues. The reason is simple: material and human resources are concentrated on the main activity, and not on the "scatter".

Today, outsourcing is actively used by large and small enterprises. The advantages and disadvantages of outsourcing are presented in table 1.

Outsourcing of functions in enterprises and organizations is a key indicator of cost reduction. This can be directly related to direct costs of production, as well as direct costs. Outsourcing specific functions to reduce costs, use the services of a specialized organization and gain experience in a specialized organization;

There are two aspects to translating fixed costs into variables. Firstly, additional costs are reduced due to the finished infrastructure of another organization (the costs of maintaining their units, such as the cost of capital construction and wages). Secondly, there is a redistribution of risks, some of which are transferred to the organization involved. Thus, outsourcing contracts, depending on the performance of work performed by the relevant organization, depend on the specific results. In addition, this organization has the potential to reduce payments due to overfulfillment of sales.

Regardless of the type of service (remuneration, development of local

computer networks, building repairs, etc.), the Service Provider provides professional services regardless of the type of service. At the same time, cost reduction will depend not only on the volume of work performed, but also on the use of alternative approaches to the organization of the process.

Redistribution and distribution of resources solves the problem of conservation and increase of resources, which are now the most important for the company.

After outsourcing car parks:

1. You can achieve a reduction in transportation costs by 10-25%.

2. Enterprises are actively engaged in core activities.

3. Transport safety will be increased to a new level, which will inevitably lead to the expansion of the client base. The use of outsourcing services has proven
