Abstract: The old global liberal order which came in happening after the end of cold war era, provide rich global liberal ambiences peace and stability to world order for contemporary international order many factor should must be enquire with analytical methodology and observational method, which country would dominate in future by what basis either economic, military, finance and trade. China, America and Russia are try to dominate each other but China has biding factor in many way.

Keywords: - Political Order, Artificial Intelligence, Belt Road Initiative, International Ballistic Missile.

Introduction: The word order means, the distribution of power between and amongst states and other key actors, giving rise to a relatively state pattern of relationships and behaviors. There is considerable agreement about the shape of word order during The Cold War period. Although The Cold War remained cold, in the sense that the adversaries avoided direct confrontation, the end of the Cold War produced ideas of liberal internationalism. The new world order had been mooted by Gorbachev in 1988. The process of transformation was further propelled with the takeover of General Agreement on Trade and Traffic (GATT) by World Trade Organization (WTO). Therefore, one of the most significant vehicles that captured the early imagination of this transformation of world into a new global world order was regarded globalization.

As regards American foreign policy, Trump Administration nurture Post – World Was – II alliance and multilateral world order. Russia advocacy in favor of the multipolar world order which emphasize the fact economic, Scientific and technological, military and culture power etc. besides non-state actors, drug cartels, global financial magnets like Morgan

Stanly, standard chartered bank, Lehman brothers and few more, scattered at different regions and centers of the world, thereby negating the chances of concentration power in a single nation or at on center while both China's and India's ascendance together is a factor to count with, Russia's continuous argument in favor of the evolution of multipolar order where by one state cannot dictate or determine the direction of the system accompanied by rising multilateralism, that's again points towards the ever dynamic changes in the international order. China is boldly pursuing aggressive, expansionist and impressionist foreign policy in the entire Asia-Pacific region and beyond in the recent past, particularly extending its sovereign claim over entire South China Sea which had also led to carouse fear psychosis among smaller regional countries throughout the Indo-Pacific. The bi-lateral relations with Pyongyang and Moscow, the bi-lateral relations with Beijing have largely a tough road to tread ahead for Washington particularly in the content of expanding Chinese grip over global trade and other economic activity where American finds it difficult to accomplish an edge vis-à-vis Beijing and the Chinese stands on North Korea and Taiwan.

The Middle East is a classic instance of a multiplicity of forces, batting violently with whoever is in power. Syria has been in torment for more than a decade with no solution forthcoming. Iraq is an imperfect democracy. Several monarchies Saudi Arabians, United Arab Emirates and Bahrain make the region an abnormal of sorts. The conflict in famous is a powerful example of a failed state masquerading according to the whims and various groups making this country a humanitarian concern. Moving towards South Asia, democracy is South Asia has its own shades of expressions. India and Sri Lanka are adhering to constitutional norms and an acceptance of the legislature / parliament as expressing people's desire. The most leading factors which brought structural shifts in the post-cold war globalization led world on a Digital Transformation, Rise of Economics of Developing Countries, Emergence of China and Populism etc.

Artificial Intelligence is most effective element in the emerging new world order. Stephen Hawking and Elion Musk have opinion that it could result in Human extinction. The new generation robotic machines, all type of mode of transportation, education, health, housing, agriculture, metrology, cosmology, warfare technology, it could be next industrial revolution. The use of AE will eat up millions of jobs it will also open new avenues of

opportunities. The growing Chines Economy a mark of new world order. China is a developmental state. Chinese Belt Road Initiative (BRI) would be milestone for world order; Now BRI would cover science, technology, health, agriculture and environmental protection. Globalization dramatically enhanced the purchasing power of few of the semi peripheral economics of the developing countries. India, South Africa and other countries doing this job, Global Terrorism and Environmental Problems will create same implementing problem. Inequalities and frustration of masses are rising and turning them hostiles this situation will create constraint for global world order. This is the biggest threats to the stability of current world order.

In this scenario American Slogan "Make America Great Again" would help to put attention of this populism. There is most spread global emotion against the global economy. The US shape global order (The UN WB etc.) for lading power in the field of military from Atlantic to pacific. The US Military interventions in Kosovo (1998) global was in 2001 against terrorism and show American desire to reshape the past cold war global order. The military and economic rise of china created a situation which challenged both US and Russia in global interest and influence. The new security strategy unveiled by the US President clearly admits that China and Russia are the greatest threat to the US global interests and influence. The strategy also declares India to be a major defense ally as well as strategic partner (White House 2017). The places China as a main driver of change in the US led global order at this juncture in 2017, the total GDP of America was $19.9 Trillion where as that of China $12.2 Trillion with possibility of surpassing the former within few decades. The per capita GDP of the US was $59792 and that of China was $8804. China is largest trading as well as largest foreign exchange country of the world.

China's defense modernization was launched in 2015 and would be in second phase in 2035. Chinese defense budget is four times to the defense budget of India and it rising at the rate of 8 percent per annum. China is producing her third and world's largest aircraft carrier. China is reducing the number of army and enhancing the proportion of naval and air forces to meet her growing new security challenges.

Conclusion: Thus, the history of last seventy-five years of international relations presents a kaleidoscopic view. Rise and fall of superpowers, mating and cramping of alliances, changing

contours of security and cultural space of the world have left remarkable imprint on the way states have crafted their engagement with each other. Now China's meteoric rise has strained the order.
